

Using AI to build trading tools.

---

The honest version.

My name is Hoi.

Curious by nature. Trader in the making.

AI is NOT a crystal ball.

AI has serious problems.  
It's forgetful.

What is AI - really?

---

Section 1

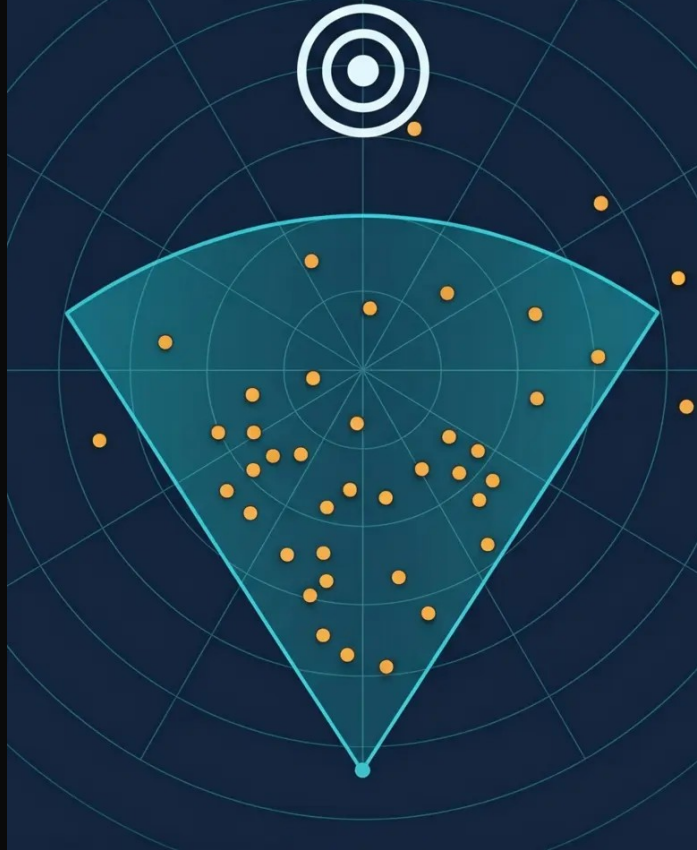

Prompt -> Agent -> Harness

It is not a brain.  
It rolls a weighted dice.

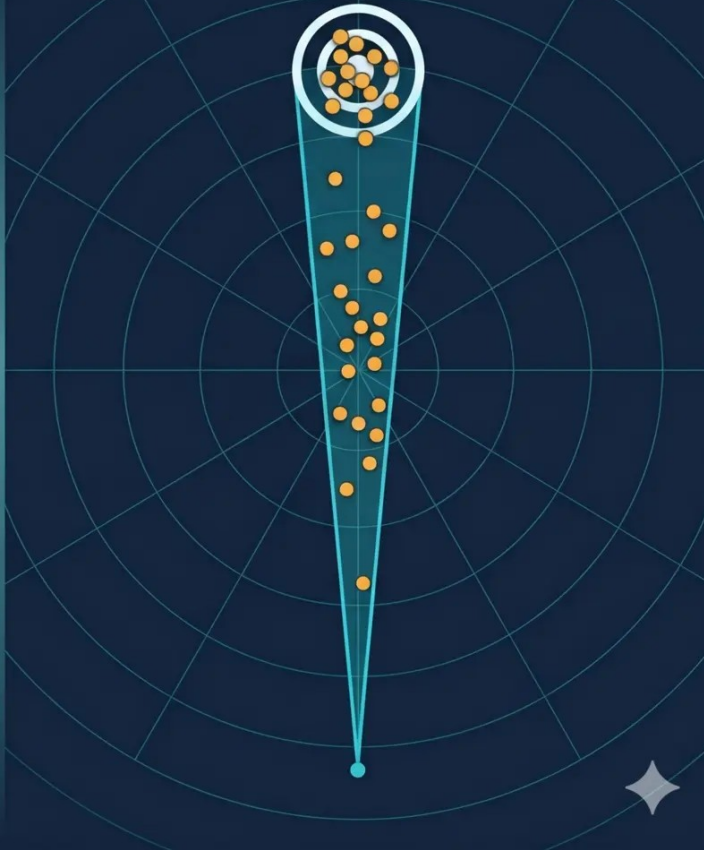

Probabilistic vs deterministic.

The demo trap.

WITHOUT AI HARNESS

WITH AI HARNESS

A harness narrows the cone.

Can it trade for you?

---

Section 2

AI is a tool, not a tipster.

What AI can't do well.

AI multiplies what you already are.

So I built an automated  
trading platform with AI.

---

Section 3

auto\_pb\_swing\_trader

It began in a spreadsheet.

Data -> filter -> backtest  
-> trade -> watch.

380,000+ backtests.

3.7+ million simulated trades.

938,000 unique after dedup.

Half of it, I broke first.

The AI is a cowboy.  
So I built a harness.

Don't climb Everest  
without a harness.

Where is this going?

---

Section 4

AI and Trading,  
it's heading that direction.

The skill isn't using AI to trade for you.  
It's how to harness it.

Want to build your own?  
Start with the workflow.

There is no hack.  
There is just the work.

Let's talk.
